

## What is XSOLIS?

# Precision Utilization Management

Equip your staff to make consistent, data-driven determinations - XSOLIS' technology ensures the right cases are reviewed at the right time, by the right person. Our proprietary Artificial Intelligence gives Case Management and Utilization Review staff real-time insight into which cases present the highest and most immediate risk to revenue, and whether a case should be escalated for second-level review.

### Case Management & Utilization Review Platform

In contrast to traditional Utilization Management processes that are manual, time consuming, inconsistent, subjective and reliant on static case review, XSOLIS' approach leverages real-time automation and proprietary analytics to continuously monitor every patient during their hospital stay, triggering alerts when revenue is at risk from changes in status, extended length of stay or payer-specific requirements. This revolutionary approach helps hospitals improve profitability by preventing the loss of valuable revenue.

### Physician Advisor Services

The XSOLIS Physician Advisor service exceeds industry standards by supporting experienced clinicians with our technology and analytics platform. This combination of data-driven insight and physician expertise provides a comprehensive and defensible case review, every time. By analyzing past medical history, severity of illness and intensity of service of a patient through analytics, XSOLIS creates a complete and holistic view of the patient's clinical picture to facilitate efficient, effective reviews and consistency across physician recommendations.

### Denials Mitigation & Management Services

XSOLIS applies highly sophisticated Machine Learning algorithms to denied claims. These algorithms identify trends across cases and segment claims by likelihood of a successful appeal. XSOLIS specialists then work to appeal these claims and navigate the cumbersome payer appeal channels, recovering maximum revenue for your organization.
